

Installation

Addendum

During installation some users may encounter the Error 1406 message shown below. Note - the actual message may change.

This behaviour occurs when Macromedia Flash Player V8.0 or later is already installed on the target machine. "Magnets and Springs" installs V7.

By design, Flash player 8.0 or later incorporates built in protection to prevent it being overwritten by an earlier version. The message is simply advising that this is happening.

The workaround for this is to:

Press the **Ignore** button repeatedly (approx 23 times) until the installation has completed successfully.

This leaves the current version of Flash Player installed on the computer and causes no loss of functionality to the "Magnets and Springs" software.
